7/7 pages indexable · 7/7 clean heading outlines · 73/73 links & images return 200 · favicon live · Lighthouse SEO 100

dancereaction.com.au SEO results

The companion to the 21 October baseline audit. Every figure here was measured on the live website after the work was finished: each page fetched and parsed, every internal link and image requested, screenshots compared pixel by pixel, and an on-page audit run on all seven pages. Rows taken from the Screaming Frog baseline are marked as such.

— 01 — Executive summary

Every quick-fix issue is resolved, and the site now has its favicon.

The baseline found four issues that could be fixed without changing what visitors see or read. All four are done and verified, and the favicon has since been added. Each affected page is the same height, pixel for pixel, at desktop and mobile width, and both booking forms still work.

Two issues need decisions or hosting work rather than a code change: the server's response time, and the remaining images over 100 KB. Two more are content choices for the owner. All four are in the action plan.

7/7
Pages with a clean heading outline
was 0 / 7 · site name no longer an H2

3
Full-size originals replaced
incl. the 2.1 MB PNG on /about/

73/73
Links and images return 200
was 1 timeout in the crawl

100
Lighthouse SEO, homepage
92 before work began today

Delivered and verified

What changed in this round

- **The site name is no longer a heading.** The header and footer "Dance Reaction" title now outputs plain text, styled exactly as before, so each page's outline starts with its own content.
- **Three oversized photos now load a sized copy.** /about/, /the-music/ and /equipment/ show the 1024 px version instead of the 2.1 MB PNG and two 2560 px originals.
- **The Site Map description is within length** at 153 characters (was 156).
- **The timed-out gallery photo loads.** gal_10.jpg returns 200; every one of the 73 internal links and images found on the seven pages returns 200.
- **The site now has a favicon.** The Dance Reaction icon shows in browser tabs, bookmarks and phone home screens, in four sizes (32, 180, 192 and 270 px), each returning 200.

— 02 — Website SEO health overview

Category status after the work.

Each rating is derived from the counts beneath it, measured on the live site on 21 October 2026.

— 03 — Key improvements

Every change, with its measured result.

Improvements delivered against the Screaming Frog baseline

Improvement	Before	After	How it was done
Repeated H2 "Dance Reaction"	7 / 7	0 / 7	Header and footer site-title widgets switched from `h2` to `div`. Their styling is class-based, so the logo text looks identical.
2.1 MB PNG on /about/	full original	923×1024 copy	Image widget size changed from "full" to "large". Same photo in the same frame; screenshots before and after match.
2560 px photo on /the-music/	174 KB original	1024×683 copy	Same change.
2560 px photo on /equipment/	237 KB original	1024 px copy	Same change.

Improvement	Before	After	How it was done
Description over 155 ch	156 ch	153 ch	/site-map/ description reworded by four characters; meaning unchanged.
Resource timeout	status 0	200	gal_10.jpg re-requested and returns 200. The timeout was the slow server, not a missing file.
Favicon	none	4 sizes	512 px icon uploaded; WordPress serves 32, 180, 192 and 270 px copies, each returning 200. The page audit no longer reports a missing favicon.
Lighthouse SEO, homepage	92	100	Measured 07:58 and 10:42 UTC on 21 October. The only failing audit before was the missing meta description, fixed in the earlier round.

— 04 — Technical SEO audit

Lighter pages; the server still needs attention.

Lighthouse, homepage — before work (07:58 UTC) and after (10:42 UTC)

Category	Before	After	Detail
SEO	92	100	no failing audits
Accessibility	97	97	no main landmark; skip link not focusable (theme template)
Best practices	96	96	browser console errors
Performance	73	68	LCP 2.6 s → 3.0 s; same failing audits both times (render-blocking requests, cache lifetimes)

Worth knowing · performance

The performance score moved down, and nothing in this work caused it

The homepage's only change in this round was the header tag, which adds no weight. Lighthouse scores vary between runs, especially on a slow host, and the failing audits were identical before and after. A caching plugin was also changed on the site during the day. Server response is the biggest lever, and it needs the hosting or caching setup reviewed, then a fresh crawl to measure.

— 05 — Crawlability & indexability

Still fully open to search engines.

Check	Before	After	Detail
Pages indexable	7 / 7	7 / 7	robots meta read from each live page
HTTP 200 on every page	7 / 7	7 / 7	fetched individually
XML sitemap	not in crawl	1 sitemap · 7 URLs	`/sitemap_index.xml` → `/page-sitemap.xml`, declared in robots.txt
PHP errors or warnings in pages	—	0	checked in the HTML of all seven pages

— 06 — On-page SEO analysis

Current state of all seven pages.

On-page score from a full audit of each URL · 10:41 UTC

Page	Score	Title	Desc	Words	Status
/	98.2	51	150	730	● Indexable
/gallery/	98.2	55	155	430	● Indexable
/the-music/	98.2	56	152	797	● Indexable
/site-map/	97.1	57	153	120	● Indexable
/about/	95.6	52	153	868	● Indexable
/contact/	95.2	57	149	38	● Needs copy
/equipment/	91.1	56	155	704	● Indexable

Average on-page score 96.2, against 92.1 when the same audit ran before any work this morning. /equipment/ lost points only for slow loading during the audit. Word counts here come from the audit tool, which counts slightly differently from Screaming Frog.

— 07 — Metadata analysis

Seven unique titles and descriptions, all within length.

Measure	Before	After	Note
Pages with a meta description	7 / 7	7 / 7	read from the rendered pages
Descriptions within 155 ch	6 / 7	7 / 7	/site-map/ 156 → 153
Unique titles, 50–60 ch	7 / 7	7 / 7	51–57 characters
Pages with og:image	–	7 / 7	not in the crawl export; checked in the page HTML

— 08 — Heading structure

Each page's outline now starts with its own content.

Page	H1	First H2 before	First H2 now
/	Dance Reaction	Dance Reaction	Hi, thanks for dropping by
/about/	About Me	Dance Reaction	A family man with his boys toys
/gallery/	Gallery	Dance Reaction	Weddings, parties & corporate events
/contact/	Contact	Dance Reaction	Dance Reaction Mobile Discos
/the-music/	The Music	Dance Reaction	All the music you require
/equipment/	Equipment	Dance Reaction	Quality and reliability
/site-map/	Site Map	Dance Reaction	Every page, at a glance

The H1 wording was left as it is, at the owner's request. Rewriting each H1 to describe the page (for example "Melbourne mobile DJ & MC equipment") remains a recommendation.

— 09 — URL & canonical analysis

Unchanged and healthy.

No URL was changed. All seven pages keep their self-referencing canonical, top-level folder depth and trailing-slash format.

— 10 — Redirects & HTTP status codes

Every link and image checked returns 200.

Check	Before	After	Detail
Internal links and images on the 7 pages	1 timeout	73 / 73 · 200	each requested without following redirects
gal_10.jpg	status 0	200	re-requested directly
Internal redirects	0	0	no link points at a redirect

— 11 — Internal linking analysis

Unchanged: every page one click from every other.

No links were added or removed. Contextual links inside body copy (for example from the homepage's "Weddings" card to the gallery) remain a content opportunity.

— 12 — Image SEO

The three heaviest photos fixed; thirteen to compress.

Page	Image served before	Image served now
/about/	Cheerful-DJ-Under-Blue-Stage-Lights.png · 2,142 KB	…-923x1024.png
/the-music/	pexels-jake-…-scaled.webp · 174 KB	…-1024x683.webp
/equipment/	pexels-eden-…-scaled.webp · 237 KB	1024 px copy

Images without alt text on the seven pages: 0 (counted in the live HTML). Thirteen images remain over 100 KB, between 100 and 139 KB each. Shrinking them needs re-compression, which subtly changes image quality, so it is listed as a next step rather than done without review.

— 13 — Duplicate & thin content

No duplicates; the contact page is still short.

There are no duplicate pages, titles or descriptions. /contact/ remains short by design. Adding a few lines on the service area and what to include in an enquiry would give it more for search engines to read, and the wording is the owner's call.

— 14 — Priority issues & recommendations

Where each baseline issue stands.

SEO issue	Before	After	URLs	Priority	Status	Next action
Oversized image (2.1 MB PNG)	full original	sized copy	1	High	Fixed	—
Slow server response	avg 1.87 s	not re-crawled	6	High	Open	Review hosting and page caching, then re-crawl
Images over 100 KB	16 / 57	13 remain	13	Medium	Partly fixed	Compress with an image optimiser
Repeated H2	7 / 7	0 / 7	0	Medium	Fixed	—
Resource timeout	1	0	0	Medium	Fixed	—
Thin contact page	61 words	unchanged	1	Low	Owner decision	Add a short paragraph
H1s are menu labels	7 / 7	unchanged	7	Low	Owner decision	Reword when ready
Description over 155 ch	1	0	0	Low	Fixed	—

— 15 — SEO action plan

What remains, in order.

Step	Action	Owner
1	Review hosting response time and confirm page caching serves cached pages; then re-crawl with Screaming Frog	VentraIP (hosting)
2	Compress the 13 images over 100 KB, reviewing each for quality	VentraIP
3	Optional: also use the new icon as the organisation logo in Google's business data	VentraIP
4	Connect Google Search Console and submit the sitemap	Owner's Google account

Step	Action	Owner
5	Decide on H1 wording and a short contact-page paragraph	Owner
6	Next crawl: include the Images, Sitemaps and Structured Data exports	VentraIP

— 16 — Baseline vs. now

The comparison in one table.

Metric	Baseline (crawl)	Now
HTML pages indexable	7 / 7	7 / 7
Links and images returning 200	110 / 111	73 / 73 checked
Descriptions over 155 ch	1	0
Pages whose first H2 is the site name	7 / 7	0 / 7
Full-size originals served on pages	3	0
Images over 100 KB	16 / 57	13 remain
Pages under 200 words	1	1
Average page response	1.87 s	re-crawl needed
Favicon	none	4 sizes live
Lighthouse SEO, homepage	92 (pre-work)	100
Average on-page score	92.1 (pre-work)	96.2

— 17 — How the site was protected

Design

Nine screenshots, before and after

The homepage at 1280, 768 and 375 px, and About, The Music and Equipment at 1280 and 375 px, were captured before and after each change. Every page kept its exact height. The only pixels that differed belong to moving elements (the spinning record, equaliser bars, rotating gallery), and the logo, footer and collage photos are identical.

Function

Forms, links and errors checked

Both booking forms render on the homepage and contact page. All 73 internal links and images return 200. No PHP error or warning appears in any page. No URL, menu, copy or template was changed.

▼ Work completed earlier on 21 October, before the baseline crawl

- Unique titles and meta descriptions written for all seven pages; three focus keyphrases and cornerstone pages set
- XML sitemap pruned from five sitemaps to one (Elementor templates, the Uncategorized category and author archive removed); date and author archives disabled
- WordPress sample post and page moved to the trash
- Alt text written for 22 images after viewing each one
- LocalBusiness structured data added using only details published on the site; default share image set
- Site language set to English (Australia); timezone set to Melbourne
- Booking and contact forms moved to Contact Form 7; testimonial arrows on mobile fixed

---

Prepared by VentraIP for Dance Reaction · Baseline: Screaming Frog "Internal – All", 21 October 2026, 111 URLs · After: live measurements on 21 October 2026 (page fetches, link and image requests, on-page audits, Lighthouse, screenshots).
