111 URLs crawled · 7 pages · 110 × 200 · 1 timeout · 16 images over 100 KB

dancereaction.com.au SEO baseline

This report records the website's SEO condition at the start of the project, using the Screaming Frog "Internal – All" crawl as its evidence. Every count and percentage below comes from that file unless a row says otherwise. Where the file does not contain the data needed to judge something, the report says so instead of guessing.

— 01 — Executive summary

A sound foundation, held back by heavy images and a slow server.

All seven pages return 200, are indexable, carry a self-referencing canonical, and have a unique title and meta description within the recommended lengths. Nothing in the crawl blocks Google from reading or ranking the site.

The problems that remain are about speed and page structure. One photo on the About page is a 2.1 MB PNG, a third of all image weight on the site. Pages took 1.87 seconds on average to respond to the crawler. Every page also starts with the same "Dance Reaction" H2 heading, inherited from the header.

— 03 — Key findings

Five things worth knowing first.

Finding	Evidence in the crawl	Why it matters
One photo is 2.1 MB	`Cheerful-DJ-Under-Blue-Stage-Lights.png`, 2,142 KB, served as the full-size original on /about/	34.8% of all image bytes on the site. On mobile data this one file can take several seconds to arrive.
The server is slow to answer	Page response 0.38–3.04 s, average 1.87 s; 72 of 110 resources took over 1 s	Slow first response delays everything after it, which hurts both visitors and Google's page-experience signals.
Every page opens with the same H2	H2-1 is "Dance Reaction" on 7 / 7 pages	The header logo text is marked up as a heading, so each page's outline starts with the brand name, not its own topic.
Metadata is already in good shape	7 / 7 unique titles (51–57 ch) and descriptions (149–156 ch)	Search results will show complete, specific snippets. Only one description runs 1 character long.
One resource timed out	`/wp-content/uploads/2026/10/gal_10.jpg` — status 0, "Connection Timeout", 1 inlink	A gallery photo the crawler could not fetch. Likely the same slow server; needs a re-check.

— 04 — Technical SEO audit

What the crawler found.

Crawl composition — 111 URLs

Type	URLs	Share	Note
HTML pages	7	6.3%	/, /about/, /the-music/, /equipment/, /gallery/, /contact/, /site-map/
Images	57	51.4%	37 WebP, 19 JPEG, 1 PNG
CSS	32	28.8%	mostly LiteSpeed-optimised files
JavaScript	14	12.6%	including jQuery 3.7.1
No response	1	0.9%	gal_10.jpg, connection timeout

Page weight and speed — 7 HTML pages

Page	Response	HTML size	Transferred	Text ratio
/	0.38 s	155 KB	30 KB	2.9%
/about/	3.04 s	147 KB	29 KB	3.3%
/gallery/	2.32 s	134 KB	26 KB	2.0%
/contact/	2.30 s	100 KB	22 KB	0.6%
/equipment/	2.21 s	153 KB	29 KB	2.8%
/site-map/	1.63 s	108 KB	22 KB	1.4%
/the-music/	1.18 s	145 KB	28 KB	3.2%

HTML is compressed well in transit (about 80% smaller). The low text-to-code ratio is typical of page-builder sites and is informational, not a ranking problem on its own. Screaming Frog reports HTTP/1.1 for every URL; that is the protocol the crawler used, so it says nothing about whether visitors get HTTP/2.

— 05 — Crawlability & indexability

Nothing blocks search engines.

Check	Result	Detail
Pages indexable	7 / 7	Indexability column "Indexable" on every HTML row
Meta robots	7 / 7	`index, follow, max-image-preview:large`
X-Robots-Tag header	0	none set
Crawl depth	0–1	every page is one click from the homepage
Meta refresh, rel next/prev, AMP	0	not used

robots.txt and the XML sitemap are not part of this export; see section 12 note and the action plan.

— 06 — On-page SEO analysis

Page by page.

Page	Words	Reading ease	H1	Status
/	765	84.9	Dance Reaction	Indexable
/about/	880	92.6	About Me	Indexable
/the-music/	823	90.1	The Music	Indexable
/equipment/	729	85.1	Equipment	Indexable
/gallery/	446	90.3	Gallery	Indexable
/site-map/	271	100	Site Map	Indexable
/contact/	61	100	Contact	Thin

Word counts include the shared testimonials block that repeats on several pages. Spelling and grammar columns are empty in this export, so they were not assessed.

— 07 — Metadata analysis

Seven pages, seven unique entries.

Page	Title ch	Title px	Desc ch	Status
/	51	484	150	Within range
/about/	52	490	153	Within range
/gallery/	55	524	155	Within range
/contact/	57	539	149	Within range
/the-music/	56	502	152	Within range
/equipment/	56	534	155	Within range
/site-map/	57	534	156	1 ch over 155

No duplicates, no missing values, no titles over Screaming Frog's 561 px limit. Meta keywords are absent, which is correct; Google ignores them.

— 08 — Heading structure

One H1 per page, but every outline starts with the logo.

Page	H1	H2 #1	H2 #2
/	Dance Reaction	**Dance Reaction**	Hi, thanks for dropping by
/about/	About Me	**Dance Reaction**	A family man with his boys toys
/gallery/	Gallery	**Dance Reaction**	Weddings, parties & corporate events
/contact/	Contact	**Dance Reaction**	Dance Reaction Mobile Discos
/the-music/	The Music	**Dance Reaction**	All the music you require
/equipment/	Equipment	**Dance Reaction**	Quality and reliability
/site-map/	Site Map	**Dance Reaction**	Every page, at a glance

Issue · repeated H2

The site name is a heading on 7 / 7 pages

The header's site-title widget outputs an `<h2>`. Headings should describe the page's own sections, so the brand name belongs in plain text.

Opportunity · H1 wording

H1s read like menu labels

"About Me", "Equipment" and "Gallery" are unique and present, so they pass every crawler check. They do not say what the business does or where. Rewording them is a content decision for the owner.

— 09 — URL & canonical analysis

Clean, short and consistent.

Check	Result	Detail
Self-referencing canonical	7 / 7	every page canonicalises to its own https://www URL

Check	Result	Detail
Folder depth	0–1	all pages sit at the top level
Lowercase, hyphenated, no parameters	7 / 7	e.g. `/the-music/`, `/site-map/`
Trailing slash consistent	7 / 7	all end in /

— 10 — Redirects & HTTP status codes

110 of 111 URLs answered 200.

Status	URLs	Share	Detail
200 OK	110	99.1%	all pages, CSS, JS and 56 of 57 images
3xx redirect	0	0%	no internal link points at a redirect
4xx / 5xx	0	0%	no broken internal URLs
0 · Connection timeout	1	0.9%	`gal_10.jpg`, a full-size gallery photo with 1 inlink

http→https and non-www→www redirects are not visible in an internal crawl of the https://www host.

— 11 — Internal linking analysis

Every page is one click from every other.

Page	Inlinks	Unique inlinks	Unique outlinks	External
/	61	7	7	0
/contact/	40	7	7	0
/about/	26	7	7	0
/the-music/	26	7	7	0
/gallery/	25	7	27	0
/equipment/	25	7	7	0
/site-map/	10	7	7	0

No orphan pages and no deep pages. Links come almost entirely from the header, footer and booking buttons; there are few contextual links inside body copy. Link Score is empty in this export (it needs Screaming Frog's crawl analysis step).

— 12 — Image SEO

16 of 57 images are over 100 KB.

Image	Size	Where it is used
Cheerful-DJ-Under-Blue-Stage-Lights.png	2,142 KB	/about/ main collage photo, full-size original
pexels-eden-…-scaled.webp	237 KB	/equipment/ main collage photo, 2560 px original
pexels-jake-…-scaled.webp	174 KB	/the-music/ main collage photo, 2560 px original
dr-home-price-b.webp	139 KB	homepage
dr-about-story.webp	136 KB	/about/
dr-music-hero.webp	134 KB	/the-music/
dr-home-how-a.webp · dr-home-how-b.webp	128 KB each	homepage
dr-about-c.webp	124 KB	/about/
dr-home-dj.webp	100 KB	homepage
6 gallery JPEGs (gal_28, IMG_89, gal_30, gal_21, gal_29, gal_06)	106–134 KB	full-size originals opened from /gallery/

Total image weight across the crawl: 6.0 MB. 37 of 57 images are already WebP. Alt text is not part of the "Internal – All" export; Screaming Frog's Images → Missing Alt Text report is needed to audit it from this tool.

— 13 — Duplicate & thin content

One thin page, by design.

Check	Result	Detail
Exact duplicate pages (hash)	0	7 distinct page hashes

Check	Result	Detail
Duplicate titles / descriptions	0	all unique
Pages under 200 words	1 / 7	/contact/ at 61 words (14.3%)
Near-duplicate content	–	columns empty; needs near-duplicate analysis enabled in Screaming Frog

— 14 — Priority issues & recommendations

Every issue, ranked.

SEO issue	Current status	URLs	%	SEO impact	Priority	Recommended action
Oversized image (2.1 MB PNG)	full-size original on /about/	1	1.8% of images	Slow load, poorer mobile experience	● High	Serve the 1024 px copy instead of the original
Slow server response	pages avg 1.87 s, max 3.04 s	6	85.7% of pages over 1 s	Delays every page view; page-experience signal	● High	Confirm page caching serves cached HTML; review hosting
Images over 100 KB	2560 px originals and large WebP	16	28.1%	Heavier pages, slower LCP	● Medium	Serve sized copies; compress the rest
Repeated H2 "Dance Reaction"	header/footer logo marked as H2	7	100%	Muddled page outline	● Medium	Output the site title as plain text, styled the same
Resource timeout	gal_10.jpg, status 0	1	0.9%	One gallery photo may not load	● Medium	Re-request; investigate if it repeats

SEO issue	Current status	URLs	%	SEO impact	Priority	Recommended action
Thin contact page	61 words	1	14.3%	Little text for Google to rank	● Low	Optional: add service area and what to include in an enquiry
H1s are menu labels	present and unique	7	100%	Missed keyword relevance	● Low	Owner decision: describe each page in its H1
Meta description over 155 ch	/site-map/ at 156	1	14.3%	May be cut off in results	● Low	Shorten to 155 or fewer

— 15 — SEO action plan

In order.

Step	Action	Type	Fixes
1	Replace full-size originals with sized copies on /about/, /the-music/, /equipment/	Quick fix	2.1 MB PNG, two 2560 px images
2	Change the header and footer site title from H2 to plain text, keeping its look	Quick fix	Repeated H2 on 7 pages
3	Shorten the /site-map/ meta description	Quick fix	1 description over 155 ch
4	Re-request gal_10.jpg and recheck every internal link and image	Verification	Timeout
5	Confirm page caching, then re-crawl to measure response times	Hosting	Slow response
6	Compress the remaining images over 100 KB	Ongoing	13 images
7	Decide on H1 wording and contact-page copy	Owner decision	H1s, thin content
8	Export Images, Sitemaps and Structured Data reports in the next crawl	Data	Areas not assessed

— 16 — Before-SEO baseline summary

The numbers to compare against.

Metric	Baseline	Source
URLs crawled	111	Screaming Frog, Internal – All
HTML pages indexable	7 / 7	Indexability
URLs returning 200	110 / 111	Status Code
Unique titles / descriptions	7 / 7	Title 1, Meta Description 1
Descriptions over 155 ch	1	Meta Description 1 Length
Pages whose first H2 is "Dance Reaction"	7 / 7	H2-1
Pages under 200 words	1	Word Count
Average page response	1.87 s	Response Time
Images over 100 KB	16 / 57	Size (Bytes)
Largest image	2,142 KB	Size (Bytes)
Total image weight	6.0 MB	Size (Bytes)

About this baseline

The crawl ran after a first round of work earlier the same day

Earlier on 21 October, before this crawl, the site's titles and descriptions, sitemap, archives, image alt text, schema and language were already set up. That is why metadata and indexability score well here. This report records the site as the crawl found it; the after report lists both rounds separately.
